

Here's a snippet to be included as part of a page using `\includeMTxAsGraphics` (as a PDF image):

Riff in C

W. A. Mozart (1756–1791)

The musical score consists of two staves. The top staff is in treble clef and common time (C). The bottom staff is in bass clef and common time (C). The music begins with a quarter note followed by a eighth note, then a sixteenth note. This pattern repeats. The second measure starts with a dotted half note followed by a sixteenth note, then an eighth note. The bass staff has a continuous eighth-note pattern throughout.

Or you can try this alternate `\includeMTx` command within a `\mus` environment:

Riff in C

W. A. Mozart (1756–1791)

The musical score consists of two staves. The top staff is in treble clef and common time (C). The bottom staff is in bass clef and common time (C). The music begins with a quarter note followed by a eighth note, then a sixteenth note. This pattern repeats. The second measure starts with a dotted half note followed by a sixteenth note, then an eighth note. The bass staff has a continuous eighth-note pattern throughout.

And the next piece will be inserted as a full page, with `\includeMTxPages`.

When using `fontspec`, add this *before* your `\begin{document}`:

`\PassOptionsToPackage{no-math}{fontspec}`

This is quite experimental so if you get an error, try clearing the cached generated files in your compile session before recompiling.

If you have a lot of pieces and text to work on, it's probably a better idea to work on a music piece in a project on its own, then add the output to your main book project with '*Add output from other project*', to make debugging easier.
