# 1 Introduction

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like "Huardest gefburn"? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

## 1.1 Objectives and motivation

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like "Huardest gefburn"? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

## 2 State of the art and theoretical background

### 2.1 First section

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

This is the second paragraph. Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

And after the second paragraph follows the third paragraph. Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

After this fourth paragraph, we start a new paragraph sequence. Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected

font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

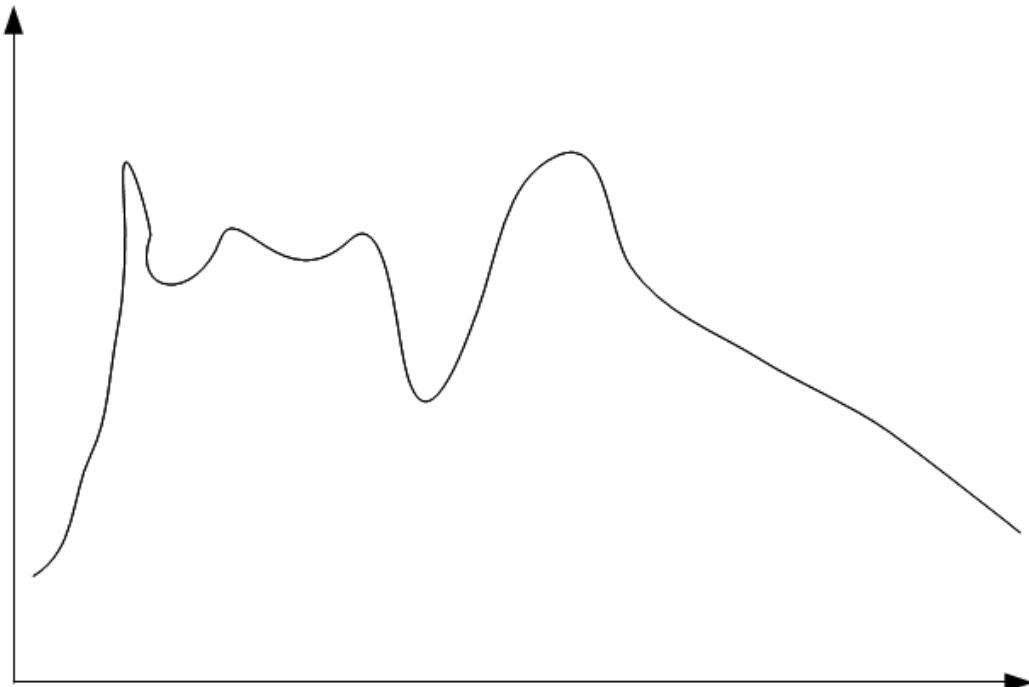

Figure 1: *First example to describe how short and long caption work for figures. Everything written in the square brackets will be listed in the list of figures, everything written in the curly brackets will be shown directly underneath the figure.*

Here I will reference the first figure (see figure 1). Also, in 4.1 a figure with multiple subfigures is shown.

The we can make a list of different things:

- First item on the list
- Second item on the list
- Third item on the list

### 2.2 Second section

## 3 Methods

### 3.1 Begin of a chapter

In the two-sided layout a new chapter always begins on a right side. Therefore, empty pages will be generated automatically at the end of the previous chapter if necessary. The one-sided layout does not do this. If you want an additional empty page, you have to insert it manually.

### 3.2 Big tables

Tables are a bit complex to generate in latex, a big help are table generators like: <https://www.tablesgenerator.com/>. Small tables fit within the text flow.

Bigger tables can be put on separate pages.

Table 1: *Material needed for gels*

material (conc.)	volume per gel	conc. in gel
Chemical 1 (40 mg/mL)	15 µL	3.00 µg/mL
TBS	15 µL	—
Chemical 2	15 µL	3.75 µg/mL
Chemical 3	27.5 µL	5.7x10 <sup>5</sup> cells
Chemical 4	27.5 µL	5.7x10 <sup>5</sup> cells
Chemical 5	100 µL	5.00 mg/mL

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

Table 2: A lot of complex columns and rows

Tube 1		Tube 2		Tube 3		Tube 4	
Antibody	Volume	Antibody	Volume	Antibody	Volume	Antibody	Volume
AB1	20 µL	AB2	20 µL	AB3	20 µL	AB4	20 µL
APC	MSC-	FITC	MSC-	PE	MSC-	PE	MSC-
Antibody	Volume	Antibody	Volume	Antibody	Volume	Antibody	Volume
AB5	2 µL	AB6	5 µL	AB7	5 µL	AB8	5 µL
FITC	MSC+	APC	MSC+	PerCP-Cy5.5	MSC+	PerCP-Cy5.5	MSC-

Table 3: Some more antibodies for FACS analysis

Tube 1		Tube 2		Tube 3		Tube 4	
Antibody	Volume	Antibody	Volume	Antibody	Volume	Antibody	Volume
AB1	20 µL	AB2	20 µL	AB3	5 µL	AB4	5 µL
FITC	EC+	FITC	EC+	FITC	EC+	FITC	EC-
Antibody	Volume	Antibody	Volume	Antibody	Volume	Antibody	Volume
AB5	20 µL	AB6	2 µL	AB7	20 µL	AB8	20 µL
APC	EC-	APC	EC-	APC	EC+	APC	EC+

### 3.3 Section

#### 3.3.1 Subsection

##### Subsubsection

Here we have some random equations:

$$V = d^2 \cdot \frac{\pi}{4} \cdot L \quad (3.1)$$

$$S = d^2 \cdot \frac{\pi}{4} + \pi \cdot d \cdot L \approx \pi \cdot d \cdot L \quad (3.2)$$

$$V = \frac{S^2}{\pi^2 \cdot L^2} \cdot \frac{\pi}{4} \cdot L = \frac{S^2}{4\pi \cdot L} \quad (3.3)$$

$$L = \frac{S^2}{4\pi \cdot V} \quad (3.4)$$

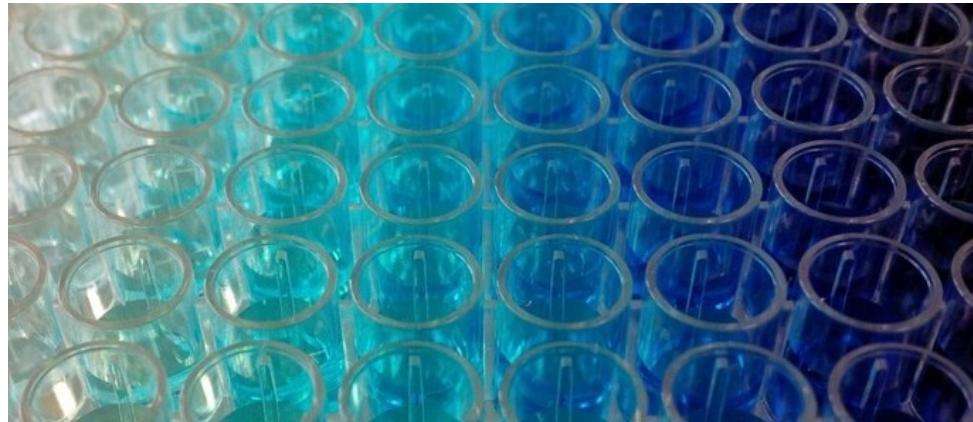

$$s = \sqrt{\frac{\sum_{i=1}^n (x_i - \bar{x})^2}{(n-1)}} \quad (3.5)$$

## 4 Results

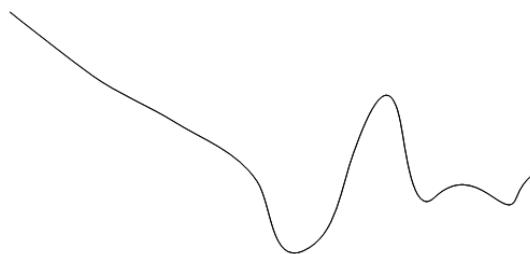

### 4.1 Figure with subfigures

As in this case the figure with subfigures is quite big, it will appear in the next page. If they are smaller, they also fit within the text flow.

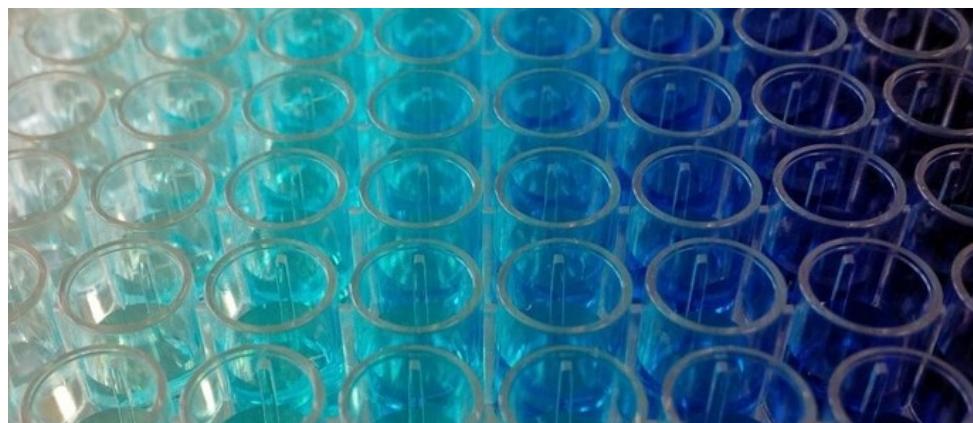

In the square brackets after 'begin figure' or 'begin subfigure', the command 'trim = l b r t' is cutting the figures on the left, bottom, right and top. Additionally, 'clip' is needed afterwards. 'rotate' can be used to rotate the figure. In the curly brackets the size of the figure can be adjusted either by using a defined width eg. 4 cm or by a percentage of the textwidth.

(a) *Caption for the first subfigure*

(b) *Caption for the second subfigure*

(c) *Caption for the third subfigure*

Figure 2: 3 subfigures can be combined in one figure. Each subfigure has a short caption and the figure itself has a caption underneath

## 5 Discussion

### 5.1 References in the text

Here we want to discuss and will use some references from our bib file.

In the bib file all your references are collected. Best is to use google scholar (<https://scholar.google.com>), as you can directly copy the Latex code. To add a reference in your text, you cite it [1]. By using the style unsrtdin and its extension, references are sorted automatically in the text [1, 2]. Also, they are compressed if there are more than 3 references in 'a row' [3–6]. The command 'nocite' is used to add a references to your List of References without mentioning in the text .

**List of abbreviations**

<i>ABM</i>	Antibiotic/Antimycotic
<i>AcLDL</i>	acetylated low density lipoprotein
<i>EGF</i>	Epidermal growth factor
<i>EGM-2</i>	Endothelial cell growth medium 2
<i>ELISA</i>	Enzyme-linked immunosorbent assay
<i>FACS</i>	Fluorescence-activated cell sorting
<i>HE</i>	Hematoxylin and eosin
<i>HEPES</i>	4-(2-hydroxyethyl)-1-piperazineethanesulfonic acid
<i>RNA</i>	Ribonucleic acid
<i>RT</i>	Room temperature
<i>vWf</i>	Von Willebrand factor

**List of Figures**

1	First example.....	3
2	Figure with multiple subfigures .....	8
3	Cool picture .....	16
4	Adding PDF as figure .....	17

**List of Tables**

1	Small table .....	4
2	FACS analysis .....	5
3	Another list of antibodies .....	5

### Danksagung

Wenn Du hier auf Deutsch schreiben möchtest, wird durch den Befehl 'selectlanuage' die deutsche Rechtschreibung bzw. Silbentrennung aufgerufen.

## **Appendix**

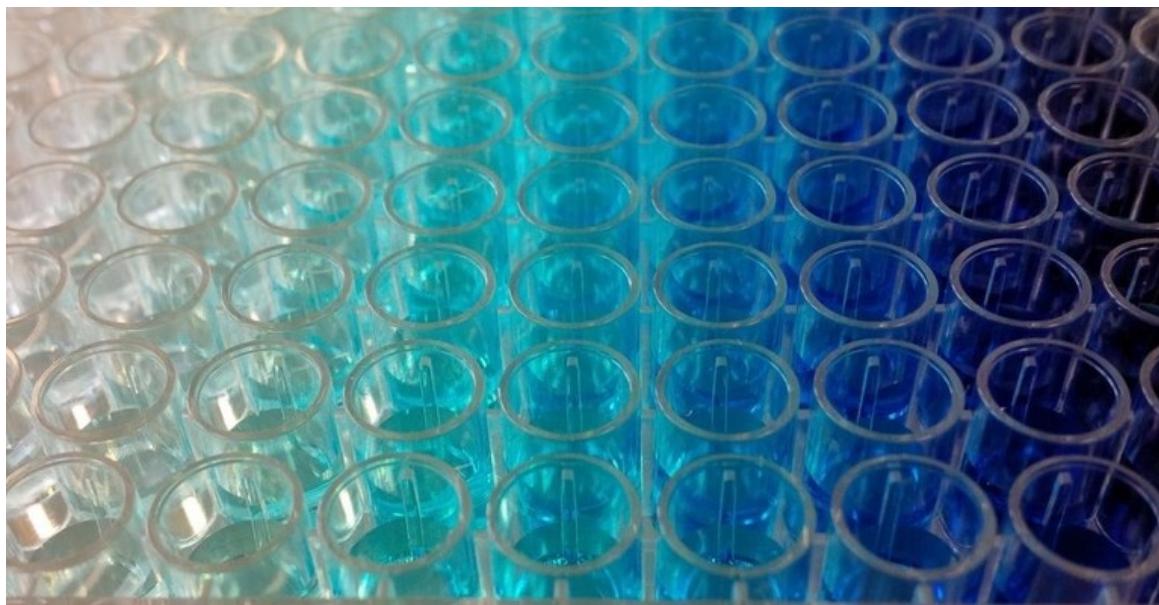

Abbildung 3: *Some cool photo taken in the lab.*

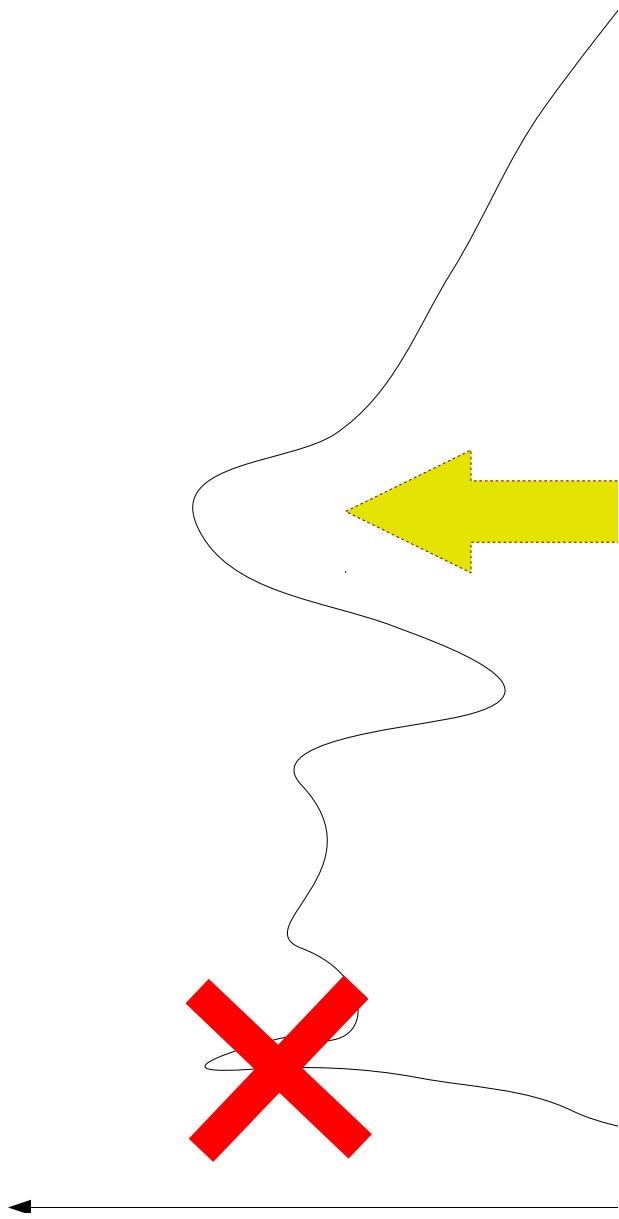

Abbildung 4: *It is possible to add pdf files as figure, while keeping your header and footer from your document. Mostly useful in the appendix.*
