

The Beamer poster version of the Radboud University Corporate Style poster Template

lama-fan
Centre for Language Studies, Radboud University Nijmegen, Nijmegen, the Netherlands

My first block!

Hoi

Disclaimer

This is a very early version, but some of us already need it quite soon. Anyway, let me know if there are any problems at l.onrust@let.ru.nl.

How to use this stuff to create a poster

Stop using this if you are not comfortable with \LaTeX . In the other case, proceed with caution.

This file (`main.tex`) contains the presentation. It consists of two columns in a `columns` environment. Each column then consists of multiple blocks, separated by whatever you think is suitable (`medskip`, `bigskip`, `vfill`, ...).

Formulae

We approximate the integral with samples $\{\mathcal{P}^{(i)}, \Theta^{(i)}\}_{i=1}^I$ drawn from $p(\mathcal{P}, \Theta | \mathcal{D})$:

$$p(w|u, \mathcal{D}) \approx \sum_{i=1}^I p(w|u, \mathcal{P}^{(i)}, \Theta^{(i)}) \quad (1)$$

and $p(w|u, \mathcal{P}, \Theta)$ is given by the recursive function with $p(w|\pi(\emptyset), \mathcal{P}, \Theta) = 1/V$ and

$$p(w|u, \mathcal{P}, \Theta) = \frac{c_{uw} - d_{|u|} t_{uw}}{\theta_{|u|} + c_{u..}} + \frac{\theta_{|u|} + d_{|u|} t_{u..}}{\theta_{|u|} + c_{u..}} p(w|\pi(u), \mathcal{P}, \Theta), \quad (2)$$

where the counts in partition P_u correspond to G_u .

My second block!

Hoi!

My funniest block!

And the obligatory boring block...

	jrc	1bw	emea	wp
jrc	3.65	10.22	9.91	9.98
1bws	9.58	7.31	9.89	8.94
emea	9.23	10.16	1.88	9.72
wps	9.12	8.83	9.97	7.76

The previous title made no sense

- ▶ a
- ▶ b
- ▶ c
- ▶ d
- ▶ e
- ▶ f
- ▶ g
- ▶ h
- ▶ i
- ▶ j
- ▶ k

Drake

Started from the bottom.
